Present Worth Analysis Calculating the present value of all cash flows associated with a project allowing for direct comparison of alternatives. Annual Worth Analysis Determining the equivalent annual cost or benefit of a project over its lifespan simplifying comparisons between projects with different durations. Rate of Return Analysis Calculating the percentage return on investment providing a measure of project profitability. Payback Period The time it takes for a project's cumulative cash inflows to equal the initial investment highlighting the speed of recouping funds. Sensitivity Analysis Examining the impact of changing key variables eg interest rates, project costs on project outcomes assessing the potential risks and uncertainties. Decision Tree Analysis Modeling potential outcomes and decisions in a structured format aiding in risk assessment and strategy development. Applying Engineering Economy in Real-World Scenarios The principles and tools of engineering economy are invaluable for a wide range of applications.
